

15 GHz to 65 GHz, GaAs, MMIC, Double Balanced Mixer

FEATURES

- ▶ Conversion loss: 8 dB typical at 15 GHz to 50 GHz
- ▶ Input IP3 (downconverter): 20 dBm typical at 15 GHz to 50 GHz
- ▶ Input IP2 (downconverter): 40 dBm typical at 15 GHz to 50 GHz
- ▶ Input P1dB (upconverter): 11 dBm typical
- ▶ LO to RF isolation: 35 dB typical
- ▶ LO to IF isolation: 35 dB typical
- ▶ RF to IF isolation: 45 dB typical at 15 GHz to 50 GHz
- ▶ 18-terminal, RoHS compliant, 4 mm × 4 mm LGA package

APPLICATIONS

- ▶ Microwave and very small aperture terminal (VSAT) radios
- ▶ Test equipment
- ▶ Military electronic warfare (EW)
- ▶ Electronic countermeasure (ECM)
- ▶ Command, control, communications, and intelligence

FUNCTIONAL BLOCK DIAGRAM

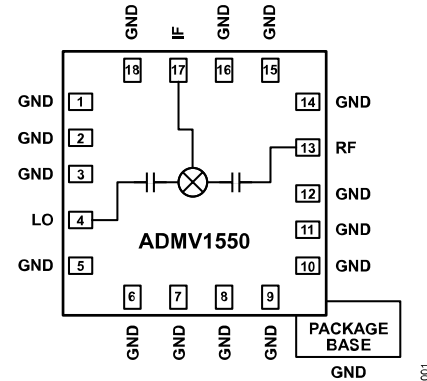

Figure 1. Functional Block Diagram

GENERAL DESCRIPTION

The ADMV1550 is a general-purpose, double balanced mixer in a leadless, RoHS compliant, surface-mount technology (SMT) package that can be used as an upconverter or downconverter between 15 GHz and 65 GHz. The wide bandwidth from DC to 20 GHz on the intermediate frequency (IF) port allows flexible frequency planning to avoid spurious products. This mixer is fabricated in a gallium arsenide (GaAs), monolithic microwave integrated circuit (MMIC) process and requires no external components or matching circuitry. The ADMV1550 provides excellent local oscillator (LO) to RF and LO to IF suppression due to optimized balun structures. The mixer operates with a typical LO amplitude 15 dBm. The RoHS-compliant ADMV1550 eliminates the need for wire bonding, allowing the use of surface-mount manufacturing techniques. The ADMV1550 is available in a compact 4 mm × 4 mm, 18-terminal land grid array (LGA) package and operates over -40°C to +85°C temperature range.

REVISION HISTORY**8/2023—Revision 0: Initial Version**

SPECIFICATIONS

$T_A = 25^\circ\text{C}$, $IF = 1\text{ GHz}$, and $LO = 15\text{ dBm}$, with the upper sideband selected, unless otherwise noted. For frequencies greater than 62 GHz, the response is limited by the amplifier used for measurements due to the inability to drive LO power at high frequencies (see the [Typical Performance Characteristics](#) section).

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

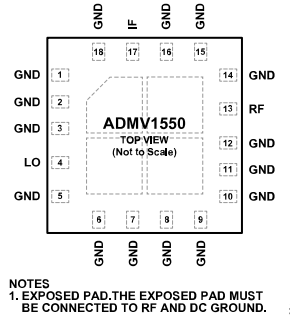

Figure 2. Pin Configuration

Table 3. Pin Function Descriptions

Pin No.	Mnemonic	Description
1 to 3, 5 to 12, 14 to 16, 18	GND	Ground. These GND pins must be connected to RF and dc ground. See Figure 3 for the interface schematic.
4	LO	LO Port. The LO pin is AC-coupled and matched to 50 Ω. See Figure 4 for the interface schematic.
13	RF	RF Port. The RF pin is AC-coupled and matched to 50 Ω. See Figure 5 for the interface schematic.
17	IF	IF Port. The IF pin is DC-coupled and matched to 50 Ω. For applications not requiring operation to DC, DC block this port externally using a series capacitor of a value chosen to pass the necessary RF frequency range. For operation to DC, the IF pin must not source or sink more than 19 mA of current. Otherwise, device malfunction or device failure may result. See Figure 6 for the interface schematic.
	EPAD	Exposed Pad. The exposed pad must be connected to RF and dc ground.

ABSOLUTE MAXIMUM RATINGS

Table 4. Absolute Maximum Ratings

Parameter	Rating
RF Input Power	25 dBm
LO Input Power	25 dBm
IF Input Power	25 dBm
IF Current	19 mA
Continuous Power Dissipation, P_{DISS} ($T_A = 85^\circ\text{C}$, Derates 1.65 mW/ $^\circ\text{C}$ Above 85°C)	108 mW
Peak Reflow Temperature (Moisture Sensitivity Level (MSL) 3) ¹	260 $^\circ\text{C}$
Junction Temperature (T_J)	150 $^\circ\text{C}$
Lifetime at Maximum Temperature (T_J)	1 Million Hours
Operating Temperature Range	-40 $^\circ\text{C}$ to +85 $^\circ\text{C}$
Storage Temperature Range	-65 $^\circ\text{C}$ to +150 $^\circ\text{C}$
Lead Temperature Range	-65 $^\circ\text{C}$ to +150 $^\circ\text{C}$

¹ Based on IPC/JEDEC J-STD-20 MSL classifications.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

Thermal performance is directly linked to printed circuit board (PCB) design and operating environment. Careful attention to PCB thermal design is required.

θ_{JA} is the junction to ambient thermal resistance, and θ_{JC} is the junction to case thermal resistance.

Table 5. Thermal Resistance

Package Type ¹	θ_{JA}	θ_{JC}	Unit
CC-18-2	50.28	602.5	$^\circ\text{C}/\text{W}$

¹ Thermal resistance values specified are simulated based on JEDEC specifications in compliance with JESD-51.

ELECTROSTATIC DISCHARGE (ESD) RATINGS

The following ESD information is provided for handling of ESD-sensitive devices in an ESD protected area only.

Human body model (HBM) per ANSI/ESDA/JEDEC JS-001.

Field induced charged device model (FICDM) per ANSI/ESDA/JEDEC JS-002.

ESD Ratings for ADMV1550

Table 6. ADMV1550, 18-Terminal LGA

ESD Model	Withstand Threshold (V)	Class
HBM	750	1B
FICDM	500	C2a

ESD Caution

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

	1	56	0	N/A	N/A	N/A
	2	84	48	48	48	48
	3	87	62	63	64	64
	4	86	62	64	61	62

IF_{IN} = 1 GHz, RF_{OUT} = 61 GHz at -10 dBm, and LO = 60 GHz at +15 dBm.

		N × LO				
		0	1	2	3	4
M × IF	0	N/A	N/A	N/A	N/A	N/A
	1	54	0	N/A	N/A	N/A
	2	68	46	47	46	46
	3	85	39	39	39	40
	4	85	59	62	61	62

Upconverter, Lower Sideband

Mixer spurious products are measured in dBc from the RF output power level. Spur values are $(M \times IF) + (N \times LO)$. N/A means not applicable.

IF input (IF_{IN}) = 1 GHz, RF output (RF_{OUT}) = 19 GHz at -10 dBm, and LO = 20 GHz at +15 dBm.

		N × LO				
		0	1	2	3	4
M × IF	0	N/A	5	4	3	3
	1	54	0	41	12	12
	2	89	47	58	52	52
	3	90	72	64	65	67
	4	88	74	63	66	63

IF_{IN} = 1 GHz, RF_{OUT} = 29 GHz at -10 dBm, and LO = 30 GHz at +15 dBm.

		N × LO				
		0	1	2	3	4
M × IF	0	N/A	7	6	6	6
	1	52	0	17	17	17
	2	87	45	56	56	57
	3	86	66	63	63	65
	4	85	68	64	62	63

IF_{IN} = 1 GHz, RF_{OUT} = 39 GHz at -10 dBm, and LO = 40 GHz at +15 dBm.

		N × LO				
		0	1	2	3	4
M × IF	0	N/A	N/A	N/A	N/A	N/A
	1	57	0	N/A	N/A	N/A
	2	88	49	48	48	48
	3	89	63	63	64	64
	4	90	63	63	64	63

IF_{IN} = 1 GHz, RF_{OUT} = 59 GHz at -10 dBm, and LO = 60 GHz at +15 dBm.

		N × LO				
		0	1	2	3	4
M × IF	0	N/A	N/A	N/A	N/A	N/A
	1	53	0	N/A	N/A	N/A
	2	66	45	45	45	45
	3	82	38	38	38	38
	4	83	61	59	59	58

THEORY OF OPERATION

The ADMV1550 is a general-purpose, double balanced mixer that can be used as an upconverter or a downconverter from 15 GHz to 65 GHz.

When used as a downconverter, the ADMV1550 downconverts radio frequencies between 15 GHz and 65 GHz to intermediate frequencies between DC and 20 GHz.

When used as an upconverter, the mixer upconverts intermediate frequencies between DC and 20 GHz to radio frequencies between 15 GHz and 65 GHz.

APPLICATIONS INFORMATION

TYPICAL APPLICATION CIRCUIT

Figure 121 shows the typical application circuit for the ADMV1550. The ADMV1550 is a passive device that does not require any external components. The LO and RF pins are internally AC-coupled. The IF pin is internally DC-coupled. For applications not requiring operation to DC, DC block this port externally using a series capacitor of a value chosen to pass the necessary IF frequency range. When IF operation to DC is required, do not exceed the IF source and sink current ratings specified in the Absolute Maximum Ratings section.

Figure 121. Typical Application Circuit

EVALUATION PCB INFORMATION

The circuit board used in the application must use RF circuit design techniques. Signal lines must have 50 Ω impedance, and the package grounds leads and exposed pad must be connected directly to the ground plane similarly to that shown in Figure 122. Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation circuit board shown in Figure 122 is available from Analog Devices, Inc., upon request.
