

Single Micropower Zero-Drift Operational Amplifiers

FEATURES

- **Supply Current 150 μ A (Max per Amplifier) Guaranteed from -40°C to 85°C**
- **Offset Voltage 3 μ V (Max, -40°C to 85°C)**
- **Offset Voltage Drift 30nV/ $^{\circ}\text{C}$ (Max, -40°C to 85°C)**
- **Guaranteed Specifications from -55°C to 150°C (LTC2054MP)**
- Common Mode Input Range from V^{-} to $V^{+} - 0.5\text{V}$
- Output Swings Rail-to-Rail
- Voltage Gain: 140dB (Typ)
- PSRR and CMRR: 130dB (Typ)
- Input Bias Current: 1pA (Typ, 25°C)
- Noise: 1.6 μ V_{P-P} (0.01Hz to 10Hz Typ)
- Supply Operation:
 - 2.7V to 6V (LTC2054/LTC2055)
 - 2.7V to $\pm 5.5\text{V}$ (LTC2054HV/LTC2055HV)
- Low Profile (1mm) TSOT-23, MS8 and 3mm \times 3mm \times 0.8mm DFN Packages

APPLICATIONS

- Thermocouple Amplifiers
- Electronic Scales
- Medical Instrumentation
- Strain Gauge Amplifiers
- High Resolution Data Acquisition
- DC Accurate RC Active Filters
- Low Side Current Sense
- Battery-Powered Systems

DESCRIPTION

The LTC[®]2054/LTC2055 are low power, low noise, single/dual, zero-drift operational amplifiers with an extended temperature version (LTC2054MP) that has guaranteed specifications from -55°C to 150°C . They are available in TSOT-23 (ThinSOT[™]) and MS8 packages. For space limited applications, the LTC2055 is also available in a 3mm \times 3mm \times 0.8mm dual fine pitch leadless package (DFN). They operate from a single 2.7V minimum supply and support $\pm 5\text{V}$ applications. The current consumption is typically 150 μ A for the LTC2054 and 130 μ A/amp for the LTC2055.

The LTC2054/LTC2055, despite their miniature size, feature uncompromising DC performance. The maximum input offset voltage and offset drift are 3.0 μ V and 30nV/ $^{\circ}\text{C}$ over the -40°C to 85°C industrial temperature range. The almost zero DC offset and drift are supported with a power supply rejection ratio (PSRR) and common mode rejection ratio (CMRR) of 130dB (typ).

The input common mode voltage ranges from the negative supply up to typically 0.5V below the positive supply. The open-loop gain is typically 140dB. The LTC2054/LTC2055 also feature a 1.6 μ V_{P-P} DC to 10Hz noise and a 500kHz gain-bandwidth product.

TYPICAL APPLICATION

-48V Low Side Precision Current Sense

V_{OS} vs Temperature

LTC2054

ABSOLUTE MAXIMUM RATINGS (Note 1)

Total Supply Voltage (V^+ to V^-)	
LTC2054/LTC2055	7V
LTC2054HV/LTC2055HV	12V
Input Voltage	($V^+ + 0.3V$) to ($V_S^- - 0.3V$)
Input Current	$\pm 10mA$
Output Short-Circuit Duration	Indefinite

Specified Temperature Range (Note 2)	
LTC2054C/LTC2055C	0°C to 70°C
LTC2054I/LTC2055I	-40°C to 85°C
LTC2054H/LTC2055H	-40°C to 125°C
LTC2054MP	-55°C to 150°C
Storage Temperature Range	-65°C to 150°C
DD Package	-65°C to 125°C
Lead Temperature (Soldering, 10 sec)	
TSOT23 and MS8 Packages	300°C

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Note 2: The LTC2054/LTC2055 are designed, characterized and expected to meet the extended temperature limits of -40°C and 125°C . The LTC2054C/LTC2055C/LTC2054HVC/LTC2055HVC are guaranteed to meet the temperature limits of 0°C and 70°C . The LTC2054I/LTC2055I/LTC2054HVI/LTC2055HVI are guaranteed to meet temperature limits of -40°C and 85°C . The LTC2054H/LTC2055H and LTC2054HVH/LTC2055HVH are guaranteed to meet the temperature limits of -40°C and 125°C . The LTC2054MP/LTC2054HVMP are guaranteed to meet the temperature limits of -55°C and 150°C .

Note 3: These parameters are guaranteed by design. Thermocouple effects preclude measurements of these voltage levels during automated testing.

Note 4: Limit is determined by high speed automated test capability. See Typical Characteristic curves for actual typical performance. For tighter specifications, please consult Linear Technology Marketing.

Note 5: The θ_{JA} specified for the DD package is with minimal PCB heat spreading metal. Using expanded metal area on all layers of a board reduces this value.

APPLICATIONS INFORMATION

Clock Feedthrough, Input Bias Current

The LTC2054 and LTC2055 use auto-zeroing circuitry to achieve an almost zero DC offset over temperature, common mode voltage, and power supply voltage. The frequency of the clock used for auto-zeroing is typically 1.0kHz. The term “clock feedthrough” is broadly used to indicate visibility of this clock frequency in the op amp output spectrum. There are typically two types of clock feedthrough in auto-zeroed op amps like the LTC2054/LTC2055.

The first form of clock feedthrough is caused by the settling of the internal sampling capacitor and is input referred; that is, it is multiplied by the closed loop gain of the op amp. This form of clock feedthrough is independent of the magnitude of the input source resistance or the magnitude of the gain setting resistors. The LTC2054/LTC2055 have an input referred residue clock feedthrough of less than $0.2\mu\text{V}_{\text{RMS}}$ at 1.0kHz.

The second form of clock feedthrough is caused by the small amount of charge injection occurring during the sampling and holding of the op amp’s input offset voltage. The current spikes are multiplied by the impedance seen at the input terminals of the op amp, and the resulting voltage spikes appear at the output multiplied by the closed loop gain of the op amp. To reduce this form of clock feedthrough, use smaller valued gain setting resistors and minimize the source resistance at the input. If the resistance seen at the inputs is less than $10\text{k}\Omega$, this form of clock feedthrough is less than the amount of residue clock feedthrough from the first form described above.

Placing a capacitor across the feedback resistor reduces either form of clock feedthrough by limiting the bandwidth of the closed loop gain.

Input bias current is defined as the DC current into the input pins of the op amp. The same current spikes that

DC to 1Hz Noise

DC to 10Hz Noise

APPLICATIONS INFORMATION

cause the second form of clock feedthrough described above, when averaged, dominate the DC input bias current of the op amp below 70°C.

At temperatures above 70°C, the leakage of the ESD protection diodes on the inputs increases the input bias currents of both inputs in the positive direction, while the current caused by the charge injection stays relatively constant. At elevated temperatures (above 70°C) the leakage current begins to dominate and both the negative and positive pins' input bias currents are in the positive direction (into the pins).

Extended Common Mode Range

The LTC2054/LTC2055 input stage is designed to allow nearly rail-to-rail input common mode signals. In addition, signals that extend beyond the allowed input common mode range do not cause output phase inversion.

Voltage Follower with Input Exceeding the Common Mode Range

Extended Common Mode Range

TYPICAL APPLICATIONS

Simple Differential Bridge Amplifier

TYPICAL APPLICATIONS

Ground Referred Precision Current Sources

Instrumentation Amplifier with 100V Common Mode Input Voltage

Gain of 1001 Single Supply Instrumentation Amplifier

PACKAGE DESCRIPTION

DD Package
8-Lead Plastic DFN (3mm × 3mm)
 (Reference LTC DWG # 05-08-1698 Rev C)

RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS
 APPLY SOLDER MASK TO AREAS THAT ARE NOT SOLDERED

NOTE:

1. DRAWING TO BE MADE A JEDEC PACKAGE OUTLINE M0-229 VARIATION OF (WEED-1)
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
5. EXPOSED PAD SHALL BE SOLDER PLATED
6. SHADED AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION ON TOP AND BOTTOM OF PACKAGE

PACKAGE DESCRIPTION

MS8 Package
8-Lead Plastic MSOP
 (Reference LTC DWG # 05-08-1660 Rev F)

NOTE:

1. DIMENSIONS IN MILLIMETER/(INCH)
2. DRAWING NOT TO SCALE
3. DIMENSION DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.
MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
4. DIMENSION DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS.
INTERLEAD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
5. LEAD COPLANARITY (BOTTOM OF LEADS AFTER FORMING) SHALL BE 0.102mm (.004") MAX

PACKAGE DESCRIPTION

S5 Package 5-Lead Plastic TSOT-23 (Reference LTC DWG # 05-08-1635)

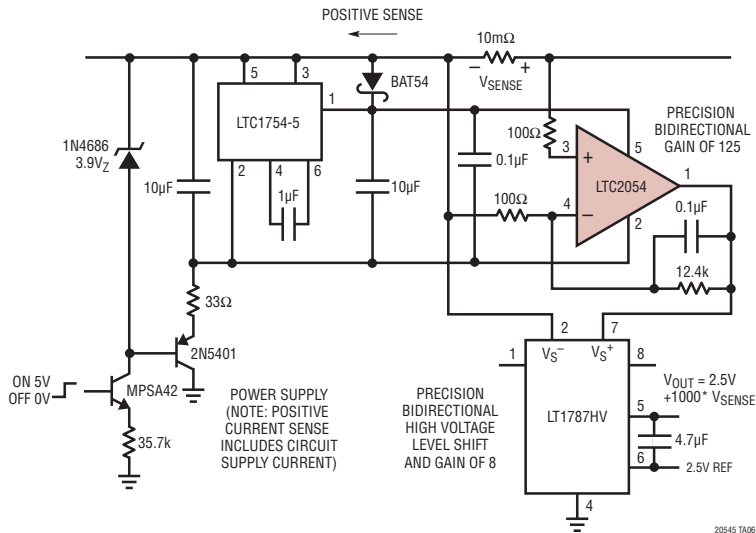

- NOTE:
1. DIMENSIONS ARE IN MILLIMETERS
 2. DRAWING NOT TO SCALE
 3. DIMENSIONS ARE INCLUSIVE OF PLATING
 4. DIMENSIONS ARE EXCLUSIVE OF MOLD FLASH AND METAL BURR
 5. MOLD FLASH SHALL NOT EXCEED 0.254mm
 6. JEDEC PACKAGE REFERENCE IS MO-193

S5 TSOT-23 0302 REV B

TYPICAL APPLICATIONS

Low Power, Bidirectional 60V Precision Hi Side Current Sense

Precision Low Drift Integrator

Ultra-Precision, Wide Dynamic Range 10Hz Bandwidth Photodiode Amplifier
